

Chidvilash Gedela

Vellore, India | gchidvilashnaidu@gmail.com

[GitHub](#) | [Portfolio](#)

PROFILE

CSE (Internet of Things) student at VIT Vellore building useful software across frontend engineering, cloud-connected systems, databases, and computer networks. Focused on translating technical concepts into clear product experiences, with current work in academic intelligence and network security.

EDUCATION

Vellore Institute of Technology
B.Tech in Computer Science and Engineering (Internet of Things)
• Relevant areas: DBMS, Computer Networks, Operating Systems, Cloud Computing, IoT Systems, Quantum Computing

Vellore, India
2024 — 2028

PROJECTS

- DBMS Project · In Progress**, [ClassPulse AI](#)2026 — Present
- Designing a PostgreSQL-backed academic intelligence system that stores student performance data, predicts subject-level risk with explainable factors, tracks interventions, and converts faculty questions into safe read-only database queries.
- Computer Networks Project · In Progress**, Secure LAN Sentinel2026 — Present
- Building a lightweight LAN monitoring and threat-alert application that identifies unusual devices, observes TCP/UDP activity, and uses routing analysis to surface actionable network events.
- Product Prototype · In Progress**, [Orbit Academic Command Center](#)2026 — Present
- Built an academic workspace that unifies timetable planning, attendance health, progress tracking, materials, and AI-ranked tasks, with learning-pattern insights that turn study data into clear next actions.
- Compiler Visualization · Completed**, [Top-Down Parser Lab](#)2026 — 2026
- Created a visual compiler lab for recursive-descent and LL(1) top-down parsing, connecting grammar theory with step-by-step parser behavior through an interactive browser interface.
- Frontend Prototype · Completed**, FoodExpress2026 — 2026
- Built responsive restaurant discovery, food browsing, profile, and order-tracking flows with reusable React components and a cohesive navigation system.
- Browser Extension · Completed**, YouTube Custom CSS Extension2026 — 2026
- Developed personalized YouTube styling with custom backgrounds and interface effects, iterating on readability, spacing, animation balance, and browser compatibility.
- Quantum Simulation · Completed**, IBM Quantum Computing Projects2026 — 2026
- Implemented Python and Qiskit circuits and compared statevector predictions with AerSimulator shots while analyzing gates, measurements, Bloch-sphere movement, and circuit depth.

SKILLS

- **Languages:** Java, Python, JavaScript, SQL, HTML5, CSS3
- **Tools:** React, Qiskit, Git, GitHub, VS Code, Cisco Packet Tracer, Oracle SQL
- **Focus:** Frontend Engineering, DBMS, Computer Networks, Cloud Fundamentals, IoT, Quantum Computing

TRAINING

Foundation of Quantum Technologies, IBM Career Education Program2026

• Quantum gates, superposition, entanglement, measurement, and circuit simulation.
